The invention relates to an isolated nucleic acid comprising any one of control the fall antisense sequences given in the specification where expression of of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid control of a cell. Also included are: (2) a host cell containing the vector; (3) an isolated control of a cell. Also included are: (2) a host cell containing the vector; (3) an isolated control of antisense nucleic acid; (4) an antibody capable of specifically binding cellular producing the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway or identifying a gene required for cellular proliferation; (8) cidentifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits proliferation of an organism, or (13) identifying the target of a compound that inhibits the compound that inhibits the extent contifying proteins or screening for homologous nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational contifying decembers and contifying the target of a compound that inhibits the control of an organism. The antisense nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, control of the printed specification, but was obtained in the target control of the printed specification, but was obtained in cells of the printed specification, but was obtained in cells of the carget control of the carget of the printed specification, but was obtained in cells of the carget carget carget carget carget carget car

Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This sequence encodes a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1323

AX ARB1 27-JAN-1999; 03-AUG-2000. Escherichia coli. Escherichia coli; E. coli; proliferation; inhibition; screening; antimicrobial; bacterial growth; antisense therapy; antibacterial. E. coli proliferation associated protein sequence SEQ ID NO:325. 05-OCT-2000 AAB15968; AAB15968 standard; protein; 477 AA. 27-JAN-2000; 2000WO-US002200 WO200044906-A2 (BLIT-) BLITRA PHARM INC. (first entry) 99US-0117405P

Novel polymucleotides and polypeptides associated with microorganism proliferation, used to identify inhibitors of bacterial growth and proliferation, for use in antisense therapy.

Claim 11; Page 242-243; 316pp; English.

N-PSDB; AAA65973. WPI; 2000-514822/46. Zyskind J, Ohlsen KL, Carr GJ, Yamamoto RT,

Trawick J, Xu HH;

Forsyth RA, Froelich JM;

AAA65809 to AAA65889 and AAA66058 to AAA66138 represent nucleotide sequences derived from Escherichia coli which inhibit E. coli proliferation. AAA65890 to AAA66055 and AAB15886 to AAA16040 represent nucleotide and protein sequences associated with E. coli proliferation. AAA66057 represent primers used for sequencing E. coli proliferation inhibiting nucleotide inserts in an example from the present invention can be used to identify a proliferation- required gene in a microorganism. By contacting identify a proliferation- required gene in a microorganism. By contacting the proliferation con activity inhibitory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the genes. CC their use in the discovery of novel antibiotics, the essential genes CC themselves and the encoded proteins. The prokaryotes used are Escherichia CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, CC pseudomonas aeruginosa and Enterococcus faecalis. The invention is also CC useful for the identification of potential new targets for antibiotic CC development. The antisense nucleic acids can also be used to identify CC proteins used in proliferation, to express these proteins, and to obtain CC antibodies capable of binding to the expressed proteins, and to obtain CC antisense nucleic acids equence is also useful to screen for homologous CC antisense nucleic acids sequence is also useful to screen for homologous CC callular proliferation protein. Note: The sequence data for this patent CC cellular proliferation protein. Note: The sequence data for this patent CC did not form part of the printed specification, but was obtained in CC electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                        the microorganism, and the manufactured antibiotic is useful for reducing the activity or level of a gene product required for proliferation of a microorganism in a subject, specifically humans. The nucleic acids that inhibit bacterial growth or proliferation can be used as antisense therapeutics for killing bacteria. In addition to therapeutic applications, the nucleic acid sequences complementary to sequences required for proliferation can be used as diagnostic tools. For example, nucleic acid probes complementary to proliferation-required sequences that are specific for particular species of microorganisms can be used as probes to identify particular microorganism species in clinical specimens. AAH81295 to AAH81487 encode the Escherichia coli proteins given in AAG8239 to AAG98431, and AAH81488 to AAH81491 represent properties of the present oliginal process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a purified or isolated nucleic acid sequence (I) consisting essentially of one of the 93 nucleotide sequences given in AAH81202 to AAH81294, where expression of the nucleic acid in a microorganism is capable of inhibiting proliferation of a microorganism.

(I) have antibacterial and antibiotic activities, and can be used in gene therapy. Expression of (I) in a microorganism inhibits proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acids encoding proteins required for Escherichia proliferation, useful for screening for antimicrobial agents.
                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 4; Page 585-586; 596pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
```

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the polypeptide cacid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of a gene in an operon required for

activity of

8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an cc compound's activity; (1) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the correlation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous mucleic acids required for cellular proliferation to isolate candidate molecules for rational credition of screening homologous nucleic acids are required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained on the province of the printed specification, but was obtained the patent of the printed specification at the sequence of the provinces.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for identifying and selecting a gene required for the proliferation in vivo of a pathogenic microorganism. The method comprises determining the virulence of mutant genes on an experimental model of infection, and their effect on enteric colonization in an axenic mouse model. ADH89967-ADH8991 and ADH8982-ADH88996 are pathogenicity or virulence targets and their coding sequences which were used in the method of the invention. Compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             capable of inhibiting pathogenicity or virulence target expression are useful for developing medicinal products for inhibiting a bacterial infection, in particular an extra-intestinal infection in the case of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 477

                                                                                                                                                                                                                                                               cc nucleic acid; (2) a host cell containing the vector; (3) an isolated copyopetide or its fragment whose expression is inhibited by the cc antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits gene product lies or a gene on which the test compound that inhibits proliferation of an corganism acte; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of accides are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to repart or for screening homologous nucleic acids required constants. The antise security is acida.
                                                           drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or paralysinosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21-MAR-2001; 2001U9-00815242.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain a misodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent of the printed specification, but was obtained in

The invention relates to an isolated nucleic acid comprising any one of the fall antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of eell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense conclude acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense continued in the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene product or that has an activity against a biological pathway of required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which he test compound that inhibits gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound section of an organism acts; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational contraction and isovery programs or for acreening but and antisense molecules for rational contractions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-MAR-2001; 2001US-00815242.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC polypeptide or its fragment whose expression is inhibited by the artisense nucleic acid; (4) an antibody capable of specifically binding CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of CC the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies CC or a gene on which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent CC product is overexpressed or underexpressed; (12) determining the extent CC strains; or (13) identifying the target of a compound that inhibits the constitution of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required constitution of an organism. The antisense nucleic acids required constitution of an organism or screening for homologous nucleic acids required constitutions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae oblypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Breton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Recombinant expression vector;

Ct the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid cell canding a polypeptide whose expression is inhibited by the antisense comprising a promoter operably linked to the nucleic acid cell canding the vector; (3) an isolated cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the vector; (3) an isolated containing the polypeptide; (6) inhibited by the cell cand; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) cellular proliferation or the biological pathway in which a proliferation, or that inhibits cellular proliferation of an corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound is activity; (11) a culture comprising strains in which the gene compound is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the contection of contiferation of the strains is present in a culture or collection of contiferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational content of the proliferation of notes are useful activity of acquired for proliferation in cells other than S. aureus, S. typhimurlum, the target prokaryotic essential genes. Note: The sequence data for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-MAR-2001; 2001US-00815242.

New antisense nucleic acids, useful for identifying proteins or i for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs rational drug discovery programs. screening ç

Claim 25; SEQ ID NO 78165; 1766pp; English.

CC (1) a vector comprising a promoter operably linked to the nucleic acid.
CC encoding a polypeptide whose expression is inhibited by the antisense cc nucleic acid; (2) a host cell containing the vector; (3) an isolated cc polypeptide or its fragment whose expression is inhibited by the antisense cc proliferaction or the activity of a gene in an operan required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway compound that influences the activity of cidentifying a gene required for proliferation, or that inhibits cellular proliferation; (8) cidentifying a gene required for cellular proliferation or the biological pathway in which he test compound that inhibits gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the gene consideration of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational construction of solate candidate molecules for rational construction of solate candidate molecules for rational construction of the printed specification, but was obtained of all electronic format directly from WIPO at the specification, but was obtained of an electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences e invention relates to an isolated nucleic acid comprising any one of e 6213 antisense sequences given in the specification where expression the nucleic acid inhibits proliferation of a cell.          The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense complete acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated collect acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the containing the vector; (7) an isolated collect acid; (4) an antibody capable of specifically binding collideration or the activity of a gene in an operon required for compound that influences the activity of the gene product or that has an activity against a biological pathway of compound that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which has the test compound that inhibits gene product lies or a gene on which the test compound that inhibits proliferation of an compound so activity; (11) a culture or its gene product lies compound so activity; (11) a culture or collection of an compound so activity; (11) a culture or collection of compound so activity; (11) a culture or collection of strains; or (13) identifying the target of a compound that inhibits the gene compound that inhibits in which the gene conditeration of the strains is present in a culture or collection of contentifying proteins or screening for homologous nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational contents to conditate molecules for rational contents uncleic acids are useful for contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S

The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening trest compounds for anti-bacterial activity. The polypeptides and polynucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.

CC sources of probes and primers for detecting the genome of P. luminescens CC and related species; to study polymorphisms; for gene analysis and for Cd detection/amplification of the genes. Antibodies (Ab) raised against the CC polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that CC carry a gene-containing vector are used to select compounds that CC modulate, regulate, induce or inhibit expression of the genes in plants, CC animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. CC luminescens. Cells transformed to express the genes are useful for CC recombinant production of the proteins, particularly toxins and CC antibacterials useful as insecticides, bactericides and fungicides. The CC genes, proteins, vectors containing the genes and Ab are also useful CC are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence CC factors and for identifying targets of human diseases for which P. CC luminescens is a model (particularly plague and whooping cough).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       glycero-beta-D-manno-heptose biosynthesis; second step.
PATHWAY: Inner core lipopolysaccharide biosynthesis; ADP-L-
glycero-beta-D-manno-heptose biosynthesis; fourth step.
MISCELLANEOUS: In both reactions the enzyme functions only with
beta anomers.
MISCELLANEOUS: The function of the domain II is independent from
